

Authentication, Reinvented.

The World's First Persistent, Presence-Aware Authentication Platform.

We didn't try to improve on existing authentication — we replaced it. Identity is verified through live biometrics, persistent proximity, and mutual trust throughout the entire session. Password credentials are gone. Not hidden. Not managed. Not a fallback. Walk up work, walk away lock. That's not a feature. That's a fundamentally different principle.

We Solve What Others Can't

"Passwordless" isn't password-free. Every other solution still hides password credentials in the background, waiting to be stolen. Passwords get reused, phished, and shared. MFA is bypassed daily. Static authentication checks you once, then stops.

- No idea if you're still there
- Zero Trust in name only
- Not post-quantum ready
- Multiple vendors required
- Long, complex installations

97% of identity attacks exploit password credentials

Microsoft, 2025

1 in 3 users approve fraudulent MFA prompts when distracted

Microsoft Security Research

~50% of help desk tickets are password-related

Gartner

THE NEW DYNAMIC PARADIGM

"True" Passwordless. Beyond the Sign-In.

Instant biometric sign-in. Face scan plus XiFi® device or phone. 2 seconds. No codes. No prompts. No friction. No biometric data stored.

Persistent, presence-aware security. The session stays locked to the verified user. Walk up work, walk away lock. Re-authenticate with a click.

Works everywhere. Shared and assigned workstations, remote desktop, offline environments.

100%
of password credential threats eliminated

THEY CAN'T COMPETE

An Entirely New Class Of Authentication.

We've revolutionized authentication with live biometrics, persistent proximity, and mutual trust. Proximia is the only platform that enforces Zero Trust after sign-in, continuously.

They Added Zero Trust Language. We Built the Architecture.

Meet the mandates. Proximia isn't retrofitted to comply — we're architected from the ground up to meet the federal mandates driving procurement.

Post-quantum ready. The world's first dynamic authentication architecture. Built to stay secure with evolving standards — moving ahead of the mandates.

XiFi® is the foundation, not the ceiling. Built to extend beyond workstations to connected devices, equipment, and real-time location, the enterprise identity layer of the AI era.

Unprecedented Security at Unimaginable Speed.

Persistent Zero Trust

Continuously verify beyond sign-in

Nothing to Steal

Eliminate the password credential entirely

Move at Lightspeed

Eliminate MFA in addition to passwords

Deploy in Minutes. Onboard in Seconds.

No rip-and-replace.

Persistent presence-aware authentication is here.

Effortless access. Uncompromising protection.
