PROXIMIA®

IDENTITY & ACCESS MANAGEMENT

True passwordless authentication with continuous protection

Proximia delivers persistent, seamless identity and access management with continuous security - eliminating passwords, reducing friction, and fortifying access controls for businesses of all sizes.

KEY BENEFITS

- ✓ **Passwordless Security** – Eliminate passwords across your entire ecosystem
- ✓ **Zero Trust Identity & Access** – No assumptions; every session is verified
- ✓ **Seamless Integration** – Works across legacy and modern systems
- ✓ **Flexible Deployment** – Cloud, on-prem, and hybrid options
- ✓ **Remote Workforce Protection** – Secure, Zero Trust access, from anywhere
- ✓ **Continuous Protection** – Actively monitor threats in real-time with:

- Biometric Triggers
- Dynamic-Proximity
- Mutual Trust
- Persistent Authentication

How Proximia Works

Proximia goes beyond static MFA and most passwordless authentication solutions, integrating biometrics, proximity validation, mutual trust, and persistence to deliver continuous security without disrupting user workflows.

Persistent Authentication

Unforgeable biometrics confirm identity at login and persist authentication to trusted devices like phones, wearables, and webcams.

Ongoing Validation

Before granting access to any critical asset, Proximia invisibly validates that the user is physically present and mutually trusted.

Continuous Protection

Invisibly, at every access event, Proximia reconfirms identity, proximity, and trust, instantly locking access if any factor fails.

Proactive Monitoring

Proximia analyzes behavior, device interactions, and contextual signals to detect anomalies in real time, ensuring only authorized users gain and maintain access.

Future-Ready

Centralized Control

24/7 Support
